Special Activity

Osmo GENIUS Mystery MONTH

Let's Explore the Bermuda Triangle!

The Bermuda Triangle is an ocean area where ships and planes mysteriously disappear...or do they?!

To get started, open Osmo Numbers and then tap on this special button.

Can you find
12 sea animals
and the
Whalesworth?!

Genius Spotlight: Iwao Takemoto

Iwao Takemoto created some of the world's most famous mystery-solvers: Scooby-Doo and his friends!

Scooby-Doo started as a TV cartoon about four teenagers and their dog Scooby. In each episode, a weird supernatural event is going on in the friends' town. They drive around in their van (the "Mystery Machine") looking for clues to help solve the case.

Iwao was the animator who brought these characters to life! Animation is a process that turns drawings into moving images.

Iwao started building up his drawing skills as a teenager. He kept a sketchbook of everything he saw, which helped him get his first job at Walt Disney Studios. Iwao helped animate Disney movies like *Cinderella* and *Sleeping Beauty*.

More about: Iwao Takemoto

After 15 years, Iwao left Disney to work as an artist and character designer at Hanna-Barbera, the TV animation studio that later made *Scooby-Doo*.

Iwao created all the original character sketches for *Scooby-Doo*. The show was so popular it inspired a handful of other mystery cartoons at the time, plus spin-offs and movies of its own.

Although Iwao's career was full of cool projects, his creativity lives on forever through Scooby and his mystery-solving gang!

*Scooby-Doo is a trademark of and © Hanna-Barbera.

Analyze fingerprints like a detective!

Fingerprints are like a personal stamp we leave on everything we touch. That's why detectives look for them when trying to solve a mystery.

To see your own unique fingerprints, you'll need:

- Pencil
- Clear scotch tape
- Optional: magnifying glass

- 1 With clean hands, rip off 10 small pieces of tape, approx. 1-inch long each. Keep them handy along the edge of a desk or table.
- 2 Shade the "Pencil Spot" darkly with pencil. Rub your fingertip over the shaded area for 5-10 seconds.
- 3 Grab a piece of tape, and carefully press your finger onto the sticky side.
- 4 Peel it off and place on the square with the finger name. Repeat with all fingers, adding more pencil shading if needed.

If you have a magnifying glass, look at your fingerprints close up. Notice all the lines and twirls? **Those shapes are uniquely yours!**
